

## Health Screening for the early detection of skin cancer

### Indicated for people with:

Multiple moles or nevi

History of burns in childhood or adolescence

Chronic sun exposure (people who have their sport or work outdoors)

Antecedents of melanoma in their relatives

History of a previous skin cancer

Patients immunosuppressed either by treatment or another cause

People with fair skin, blond or red hair, low photo types (who always burn, and do not tan)

### Anyone can have a skin cancer and should be consulted if:

There are changes in a previous mole or nevus (in shape, size, color, itching, ...)

Appearance of a mole or previous skin lesion that previously did not exist

Small scales or crusts that do not heal that last more than 1 month on the skin

Appearance of a fast growing growth
