

Women's Health Check

Check-up for women under 45

Consultation with the doctor

Blood and urine tests, according to each patient's needs

ECG

PA and lateral chest X-ray

Abdominal ultrasound

Spirometry in patients who smoke

Gynaecological review: consultation and examination with the gynaecologist including cervical cytology (smear) and gynaecological ultrasound. The specialist will decide which breast investigations should be performed: breast tomosynthesis (3D mammography) and/or breast ultrasound

Whole-body MRI without contrast for those who would prefer a more in-depth investigation. In this case, abdominal ultrasound will not be performed. MRI is **optional** and is not included in the price.

Check-up for women over 45

Consultation with the doctor
